Environmental Monitoring Update: Week of February 27, 2023

Air Monitoring

Below are graphs indicating the results of air monitoring for volatile organics during construction activities for the period February 27, 2023 through March 3, 2023. Average daily concentrations are shown for each of the 14 stations in the network. Station locations are shown in the schematic below.

Meteorological data collected in the project staging area are shown in the Table below for the same calendar period as well. The data reflected in the graphs represent readings from 6:00 am – 6:00 pm on working days. There were no concentrations of volatile compounds or dust attributable to construction activities above the threshold during the same calendar period.

Noise Monitoring

Noise monitoring data was collected at the Staging Site and adjacent to work activities within the canal. All noise monitoring data collected at these locations was below the 85 dBA allowable equivalent noise level.
