## **1. SCOPE OF MONITORING**

The following report summarizes water quality monitoring data collected during the week of June 13, 2022. In accordance with the Water Quality Monitoring Plan for In-waterway Construction Activities (WQMP) three turbidity buoys were deployed to monitor turbidity at the start of dredging between Union Street Bridge and the head of the canal. One turbidity buoy was deployed just south of the 3<sup>rd</sup> Street Bridge outside of the air curtain and traditional turbidity curtain. This buoy is referred to as the 3<sup>rd</sup> Street Sentinel Buoy. A second turbidity buoy was deployed just south of the Union Street Bridge and is referred to as the Union Street Sentinel Buoy. The third turbidity buoy was deployed in the Fourth Street Turning Basin in order to monitor background turbidity unaffected by in-water construction activities. This turbidity buoy is referred to as the Ambient Buoy. Prior to dredging north of the Union Street Bridge, on January 22, 2021 a fourth turbidity buoy was deployed just south of the Union Street Bridge and was referred to as the Union Street Sentinel Buoy. This fourth turbidity buoy was removed prior to the start of pipe pile installation. On Wednesday, September 22, 2021, the Carroll Street Sentinel Buoy was relocated to the west side of the canal where Degraw Street intersects the canal to monitor cofferdam removal activities conducted in the vicinity of the Flushing Tunnel. This buoy was renamed the Degraw Street Sentinel Buoy during cofferdam removal activities. On October 14, 2021, the Degraw Street Sentinel Buoy was removed from the canal for servicing. On October 20, 2021, the Degraw Street Sentinel Buoy was redeployed to its position south of the Carroll Street Bridge and was renamed to the Carroll Street Sentinel Buoy. On November 15, 2021, the Carroll Street Sentinel Buoy was moved to the Union Street Bridge and renamed the Union Street Sentinel Buoy. On December 3, 2021, the Union Street Buoy was removed from the canal for servicing and re-deployed at 3<sup>rd</sup> Street Bridge in preparation for the resumption of ISS operations. On December 8, 2021, a third sentinel buoy was deployed just south of the Carroll Street Bridge. On April 21, 2022, the buoy deployed at the Carroll Street Bridge was relocated to the Union Street Bridge. Each turbidity buoy was equipped with a YSI EXO3 water quality meter with optical turbidity sensor. The buoys were field calibrated and programmed such that readings were collected every 15 minutes. After each measurement, the turbidity data were transmitted to a File Transfer Portal (FTP) site via telemetry. No handheld measurements were collected during this reporting period. Visual observations of turbidity and sheen are summarized in Section 4.

## 2. REPORT OF EXCEEDANCES

An exceedance of the trigger criterion occurred at the Union Street Sentinel Buoy on Wednesday, June 15, between 12:30 PM and 1:30 PM. No exceedance of the action level criterion occurred during the reporting period. Further information is provided in Section 2.1.

- **Trigger criterion** – Any of the following:
  - The rolling average of the relevant sentinel buoy turbidity measurements over a one-hour period exceeds the rolling average of the ambient buoy turbidity measurements by 20 NTU excluding any eliminated outlier measurements and in-waterway construction activities cannot be immediately excluded as the source following consultation with EPA; or
  - Either an oil sheen or a turbidity plume is visually observed at the relevant sentinel buoy and in-waterway construction activities are readily identified as the source.
- **Action criterion** – Any of the following:
  - The rolling average of the turbidity measurements of the sentinel buoy outside of RTA1 over a one-hour period exceeds the rolling average of the ambient buoy turbidity measurements by 40 NTU excluding any eliminated outlier measurements and in-waterway construction activities cannot be immediately excluded as the source following consultation with EPA; or
  - Either an oil sheen or a turbidity plume is visually observed outside of RTA1 and any deployed engineering controls and in-waterway construction activities are readily identified as the source.

An outlier is defined as a reading that is outside the range of 50 to 200 percent of the average of the three previous readings. In addition, to be considered an outlier, the subsequent reading must return to a range of 75 to 133 percent of the average of the three readings preceding the outlier.

### 2.1 Response to Criteria Exceedances

The trigger level criterion serves to provide early notification to the contractor of construction activities that may lead to an exceedance of the action level criterion. In the event of an exceedance to the trigger criterion, the contractor will not be stopped, and the contractor will be directed to investigate the source of the exceedance and evaluate Best Management Practices (BMPs). In the event of an exceedance to the action level criterion, in-waterway construction activities may be slowed or temporarily suspended as necessary while the contractor investigates the source of the exceedance and appropriate mitigation and corrective measures are determined. A more detailed description of responses to exceedances of the trigger and action level criteria is provided in Section 4.2 of the WQMP.

The exceedance of the trigger criterion that occurred at the Union Street Sentinel Buoy on June 15, 2022 was due to temporarily resuspended sediment caused by propwash from a passing tug.

### 3. TURBIDITY BUOY DATA

The following section provides turbidity data for the sentinel and ambient turbidity buoys from 7 AM to 6 PM from June 13 – June 17, 2022. One exceedance to the numerical rolling average trigger criterion occurred at the Union Street Sentinel Buoy, as described in Section 2. No exceedances to the numerical rolling average action criterion were observed during the reporting period.

Table 1 below provides a summary of the turbidity data for the reporting period.

Date	Average Rolling Average Difference (NTU)		Maximum Rolling Average Difference (NTU)	
	3rd St - Ambient	Union St - Ambient	3rd St - Ambient	Union St - Ambient
Monday, June 13, 2022	0.93	1.20	5.73	6.04
Tuesday, June 14, 2022	2.24	3.92	10.31	11.00
Wednesday, June 15, 2022	1.52	4.21	6.57	22.65
Thursday, June 16, 2022	0.67	1.84	3.68	8.07
Friday, June 17, 2022	-0.21	0.68	1.49	2.55

**Table 1.** Daily average and maximum differences between the rolling average turbidity readings from RTA1 sentinel buoys and the ambient buoy between 7 AM and 6 PM.

#### 3.1 Monday, June 13, 2022

**Figure 2.** Hourly rolling average turbidity readings on Monday, June 13, 2022, from 7 AM to 6 PM.

**Note:** No outlier turbidity readings above 20 NTU were detected.

### 3.2 Tuesday, June 14, 2022

**Figure 3.** Hourly rolling average turbidity readings on Tuesday, June 14, 2022, from 7 AM to 6 PM.

**Note:** No outlier turbidity readings above 20 NTU were detected.

### 3.3 Wednesday, June 15, 2022

**Figure 4.** Hourly rolling average turbidity readings on Wednesday, June 15, 2022, from 7 AM to 6 PM.

**Note:** A turbidity reading from the Union Street Sentinel Buoy of 27.41 NTU was removed as an outlier in accordance with the water quality monitoring plan.

### 3.4 Thursday, June 16, 2022

**Figure 5.** Hourly rolling average turbidity readings on Thursday, June 16, 2022, from 7 AM to 6 PM.

**Note:** No outlier turbidity readings above 20 NTU were detected.

### 3.5 Friday, June 17, 2022

**Figure 6.** Hourly rolling average turbidity readings on Friday, June 17, 2022, from 7 AM to 6 PM.

**Note:** No outlier turbidity readings above 20 NTU were detected.

## **SUMMARY OF VISUAL OBSERVATIONS**

Sheen was observed above background conditions during work operations. These sheens were contained within RTA1 by the air curtain deployed south of the 3<sup>rd</sup> Street Bridge. A temporary boom was also deployed south of the Union Street Bridge to contain sheens north of the Union Street Bridge to the extent practicable.

**APPENDIX A**  
**Turbidity Data Tables**
